#### Dear Financial Executive,

You receive the IAFEI Quarterly, Special Issue Treasury July 2013.

This is another issue of the electronic professional journal of IAFEI, the International Association of Financial Executives Institutes.

This journal, other than the IAFEI Website, is the internal ongoing information tool of our association,

destined to reach the desk of each financial executive, or reach him, her otherwise,

at the discretion of the national IAFEI member institutes.

The corporate treasury function has been, and is being, directly and immediately impacted by the many diverse facets and consequences of the recent and ongoing financial crises in several world regions.

This present **Special Issue Treasury July 2013** provides you with a set of articles:

Survey Results: " *The impact of the financial crisis on bank relationships and financing conditions*", by EACT, European Association of Corporate Treasurers. Several member institutes of IAFEI are as well associated to this European Association.

White Paper, *SEPA: the countdown begins*. By Deutsche Bank, Global Transaction Banking.

Six presentations, given on a set of treasury subjects, at the ACT Annual Conference, May 1 - 3, 2013, in Liverpool, United Kingdom, organised by ACT, the Association of Corporate Treasurers, United Kingdom. To this association, several IAFEI member institutes maintain good relationships, and through these IAFEI has got access to these presentations.

IAFEI is thankful for having received permission from the Association of Corporate Treasurers, ACT, as well as from all individual presenting corporations and professionals to include their presentations in the original form in this

#### Special Issue Treasury July 2013.

Once again, I repeat our ongoing invitation to IAFEI member institutes, and to their members, to send us articles for inclusion in future IAFEI Quarterlies, and to also send to us your suggestions for improvements.

With best personal regards

Helmut Schnabel

Helmut Salmabel

# The impact of the financial crisis on bank relationships and financing conditions

The *European Association of Corporate Treasurers* (EACT) is a grouping of 20 national associations representing treasury and finance professionals from 19 countries of Europe.

Between November 2012 and February 2013 the EACT conducted its fourth survey to provide a pan-European view of the impact of the financial crisis on the bank relationships of companies and on financing conditions for corporates. The survey received 516 answers from 18 countries. The distribution of the responses – which came from all major countries in the Europe – is shown below<sup>1</sup>.

The key messages coming from the survey are:

- Whilst financing conditions remain difficult there are signs of improvement or at least of less sustained deterioration
- One company out of five is still experiencing a reduction in credit availability. However this compares with the situation in mid-2009 when roughly 50% of companies reported reductions
- Whereas in mid-2009 29% of companies reported that banks were cancelling credit lines this has now reduced to 11%
- Banks are still putting pressure on pricing, but less so than at the beginning of the crisis: 43% of companies report upward pressure on pricing of uncommitted short term funding compared with 80% mid-2009
- The response of banks to requests for increased lines of credit has remained broadly constant over the four surveys, with roughly two-thirds offering such support to companies
- The majority of companies reported that additional efforts are being made to centralise cash within their groups

**Head office:** 20, rue d'Athènes - F-75442 Paris Cedex 09 - France Phone: +33 1 42 81 53 98 - Fax: +33 1 42 80 18 90 - E-mail: <a href="mailto:secretary@eact.eu">secretary@eact.eu</a> - Website: <a href="mailto:www.eact.eu">www.eact.eu</a>

<sup>&</sup>lt;sup>1</sup> <u>Responses by country</u>: Austria: 5; Belgium: 1; Czech Republic: 16; Finland: 20; France: 86; Germany: 23; Hungary: 16; Ireland: 32; Italy: 46; Luxembourg: 1; Netherlands: 54; Poland: 34; Slovakia: 13; Slovenia: 34; Spain: 45; Sweden: 12; Switzerland: 33; United Kingdom: 45

• The survey identified disappointing efforts by banks to communicate with their customers on the impact of new regulations, with only 22% of companies reporting banks' briefing them on EMIR (derivatives regulation)

Commenting on the survey results, EACT Chairman Richard Raeburn said:

"Our survey underlines that funding conditions remain challenging for companies across Europe. Whilst there is evidence of improvement it is disappointing to see confirmation that whilst businesses seek to grow economic activity and build employment financing that growth remains difficult".

Detailed analysis of the survey results is attached.

Press enquiries on the survey can be addressed to:

Richard Cordero European Association of Corporate Treasurers +33 1 42 81 98 36 richard.cordero@afte.com

#### **Analysis of Survey Results**

#### 1. Company turnover of respondents:

Less than 100 million Euros: 16%

Between 100 and 500 million Euros: 23% Between 500 million and 1 billion Euros: 14%

Between 1 and 2 billion Euros: 17% More than 2 billion Euros: 30%

Participation in the survey was well spread across the very largest companies and small and medium sized enterprises (SMEs).

For questions under the headings "Existing credit lines", "Changes in conditions" and "New lines", the respondents were asked to provide an answer based on their experience since the third survey in autumn 2011.

#### 2. Existing credit lines

Has your company had any credit lines reduced by the lenders?

Yes: 18% No: 82%

If yes, were the lines committed, uncommitted or a mixture?

Committed: 24% Uncommitted: 26%

Mixture: 50%

In the similar survey run in autumn 2011, 22% of the companies had experienced a reduction in existing credit lines. These percentages were 27% in summer 2010 and 47% in mid-2009.

Has your company had any credit lines cancelled?

Yes: 11% No: 89%

If yes, were the lines committed, uncommitted or a mixture?

Committed: 23% Uncommitted: 37%

Mixture: 40%

In respect of the cancellation of credit lines, the percentage fell from 29% (mid-2009) to 19% (summer 2010) to 13% (autumn 2011) and to 11% (winter 2012-2013).

#### 3. Changes in conditions

Has any of your banks increased the margin applied to your uncommitted short term credits?

Yes: 43% No: 57%

If yes, the increase of the margin is:

Less than 0.50%: 44% From 0.50% to 1%: 39% From 1% to 3%: 15% More than 3%: 2%

Banks are still putting pressure on pricing, but less than at the beginning of the crisis, where 80% of companies had seen increased spreads applied to short term credits.

Has any of your banks changed the margin and / or other charges applied to your committed lines of credit?

Yes: 33% No: 67%

If yes, the increase of the margin (or equivalent in other charges) is:

Less than 0.50%: 44% From 0.50% to 1%: 36% From 1% to 3%: 19% More than 3%: 1%

On committed lines, the spreads charged to companies have increased for 1 company out of 3. The level of these increases has exceeded 0.50% for 56% of the respondents to this question.

For these questions, what are the reasons given by the banks:

Bad company financial statements: 9% Credit standing of the lending bank: 16% Parent company bank rating problems: 3%

Impact of new regulations (Basel III, CRD 4 ...): 36%

**Other: 36%** 

The changes in conditions are caused by the financial situation of the borrower in only 10%.

#### 4. New lines

Have you asked your banks to increase uncommitted short term lines of credit?

Yes: 31% No: 69%

If yes, your banks: Accepted: 69% Refused: 31%

Have you asked your banks to increase committed lines of credit?

Yes: 33% No: 67%

If yes, your banks: Accepted: 80% Refused: 20%

As in the three first surveys, when there is a request for an increase of credit lines (committed or not), banks accepted in more than 2 cases out of 3.

#### 5. Attitude of the banks

Has any of your banks seeking additional securities (pledges, guarantees, raising the level of covenants ...) in return for lending or other credit commitments?

Yes: 31% No: 69%

Are banks actively seeking to tie ancillary operational business to lending commitments?

Yes, more than pre crisis: 60% No more than pre crisis: 40%

Has any of your banks stopped financing in some currencies?

Yes: 18% No: 82%

Are you financing your company more on the financial/capital markets (commercial paper, bonds ...) and less with your banks?

Yes: 28% No: 72%

What is the percentage of your financial loans covered by your banks?

Less than 33%: 37% Between 34 and 66%: 19%

More than 67%: 44%

The respondents are still relying on their banks (only 28% of the respondents are financing more on the financial markets), although banks are actively seeking to tie ancillary operational business to lending commitments.

#### **Comments from respondents**

There was one recurring theme in comments: when relevant, the financing through the parent company has increased.

#### 6. New regulations

Have your banks informed your company on the likely impact on pricing of implementing Basel III and CRD IV?

Yes: 48% No: 52%

Are your banks concentrating on trying to attract your surplus cash directly in their balance sheets, as opposed to encouraging other types of investments such as UCITS?

Yes: 47% No: 53%

Have your banks informed your company on the likely impact of implementing EMIR?

Yes: 22% No: 78%

Banks seem to be reluctant to inform their customers on the impacts of new regulations: only 1 client out of 2 regarding Basel III and 1 out of 5 regarding EMIR.

#### 7. New sources of financing

Has your company launched financing programs like Schuldschein, US commercial paper ...?

Yes: 11% No: 89%

Has your company increased the recourse to factoring?

Yes: 20%

No: 80%

Has your parent company accelerated the cash centralization inside your group of companies?

Yes: 62% No: 38%

Since the beginning of the financial crisis, have you asked a credit rating agency to rate your company?

Yes: 23% No: 77%

Cash centralization is the preferred way to find new sources of financing. New financing programs had been launched only by 1 company out of 10.

If you can choose to margin on your mark to marketed transactions, do you prefer margining to lower the credit risk premium?

Yes: 49% No: 51%

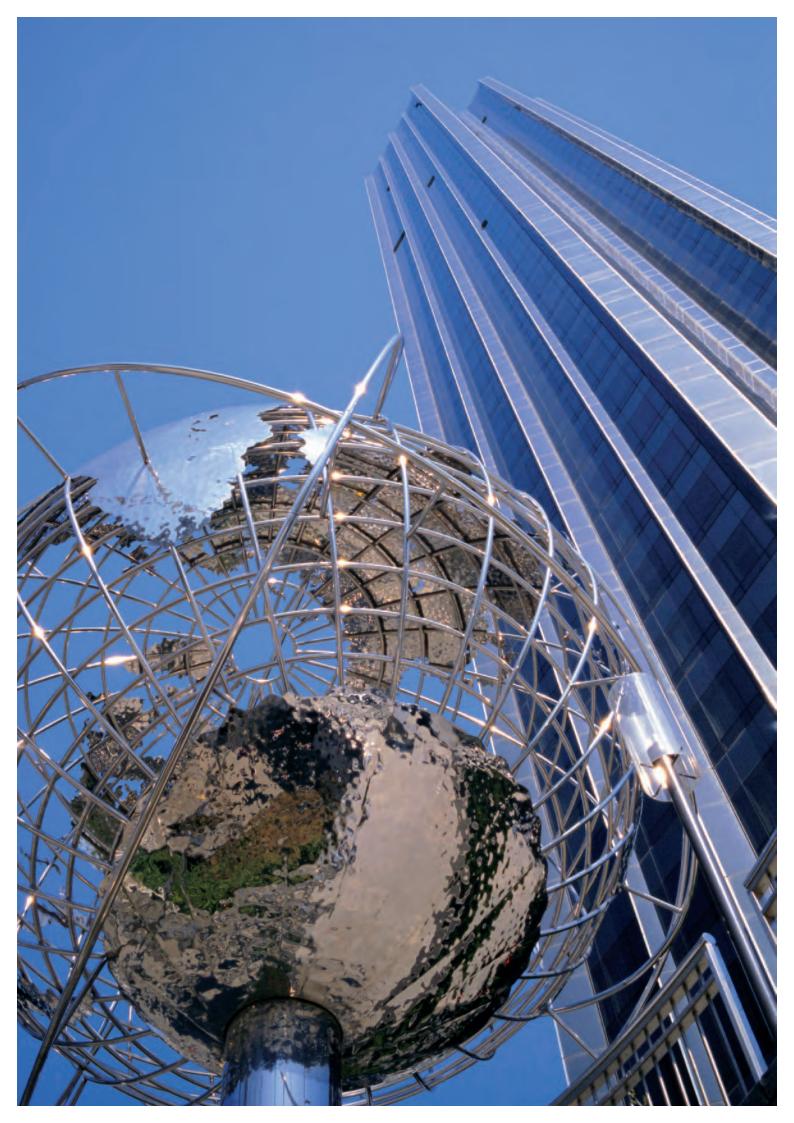

# SEPA: the countdown begins

Overcoming the challenge of compliance with the support of a capable and knowledgeable banking partner

Passion to Perform

Deutsche Bank's White Paper series provides in-depth analyses of the broad spectrum of issues affecting the global corporate treasury management industry today. By identifying and evaluating the reasons for, impact of, and potential solutions to the latest game-changing developments in this space, White Paper charts the course to maintaining a competitive edge despite challenging market conditions. In this White Paper Karsten Becker, Senior Product Manager for Corporate Payables & Receivables, discusses how time is up for corporations taking a "wait-and-see" approach to SEPA.

There has been much debate on the subject of SEPA (Single Euro Payments Area). The initiative's benefits and feasibility have all been called into question and, as a result, for some sceptics the project's success has been in doubt. Any such uncertainties have now been quashed by the announcement of an official end-date for SEPA migration by European law makers.

February 1, 2014 is the date by which all corporates operating in the European Union (EU) and European Economic Area (EEA) must be using the SEPA Credit Transfer (SCT) and SEPA Direct Debit (SDD) instead of existing non-urgent mass credit transfers and direct debits. It is hoped that this move will eventually reduce the cost of operating dual systems and mark a further significant step in the creation of a true European borderless-payments landscape.

The deadline-decision, therefore, provides not only muchneeded legal clarity and certainty on an intricate and far-reaching initiative; but acts as something of a game-changer. SEPA is no longer an optional initiative. It is regulatory, which makes it a top priority. As a result corporates, particularly larger companies that tend to have more complex payments requirements, must begin migration preparations immediately if they are to meet the deadline. Many will find this a complex task that can only be made possible with the support of a capable and knowledgeable banking partner.

## SEPA: the story so far

While the end-date may be responsible for the renewed focus on SEPA, the initiative is hardly new. The electronic europayments harmonization initiative has been a reality since 2008.

January 28, 2008 saw the launch of the SEPA Credit Transfer, which was followed the subsequent year by the introduction of the SDD. These services paved the way for the project, which when fully developed, should fuel technology innovation and lead to an increasingly competitive future payments market.

While this ultimate goal may be some time away, SEPA can bring more immediate benefits for corporates, particularly those conducting business in many European countries.

The first of these benefits are the possibilities the project provides for payments processing standardization and optimization. Not only can this increase operational efficiency, which in turn decreases costs, but it can also reduce complexity and improve transparency.

Faster settlement times and the principle of credit without deduction also offer major advantages for users of the SEPA credit transfer in terms of company cash flow. The initiative dictates that the maximum execution time for SEPA credit transfers is one business day, and the beneficiary's account must be credited in full without the deduction of fees from the principal amount. As companies can be certain of when funds will arrive and how much they can expect to receive, working capital management can be significantly improved. In credit-straitened times, optimal company cash flow management is a vital tool for success and business sustainability.

The SDD offers, for the first time, a direct debit instrument for cross-border direct debits (domestic ones are of course covered as well). Besides the core scheme the SDD also offers a business-to-business (B2B) scheme.

#### The most important differences between the two are:

- Usage
  - Core SDD: can be used with consumers and companies
  - B2B SDD: must be used with companies only
- Return right by debtor
  - Core SDD: eight weeks after debit
  - B2B SDD: no return right after debit
- Mandate check by debtor bank
  - Core SDD: optional
  - B2B SDD: mandatory

Despite such advantages, corporate take-up of SEPA has been painfully slow. Yet rather than supporting the SEPA-sceptics' argument, this reluctance is perhaps unsurprising.

As a voluntary project, SEPA implementation by any corporate necessitated a solid business case and, for many, the pro-migration argument simply was not strong enough – despite the potential benefits. Migrating payments and direct debits to SEPA format can be a costly undertaking, and many companies have been (understandably) averse to invest in this while faced with a series of more immediate pressures.

The end-date announcement, however, has removed the need for a business case and return on investment requirement. As a result, the debate as to whether or not to make the move to SEPA is dead; the question now is how to best manage the transition. Though the required level of corporate preparation effort will rise in accordance with the complexity of existing payments processes, even those with more basic needs should put the migration wheels in motion immediately if they are to meet the deadline and reap the rewards SEPA can bring.

## The compulsory steps to SEPA migration

Though some companies will find addressing the various tactical and strategic steps to SEPA compliance more challenging than others, a successful transition – for all organizations – must begin with two crucial elements: a designated SEPA project team and a firm decision on whether to take a phased or so-called 'big bang' approach to implementation. Whatever the chosen path, the first port of call for corporate SEPA teams should be their bank partner(s), who should be able to offer the necessary expertise and technical support to steer companies through the compulsory – and optional, if desired – challenges and changes associated with the SEPA credit transfer and direct debit scheme.

One of the initial strategic points companies must consider is the centralization and/or consolidation of the payments function, both of which can lead to cost savings, efficiency gains and ramp-up the benefits of the SEPA initiative. By reducing the number of accounts – and indeed bank relationships – corporates can significantly reduce complexity and increase transparency throughout the treasury value chain. This can be of great potential benefit to working capital management, as well as aid reporting and reconciliation. When discussing this issue, larger companies may wish to explore the prospective advantages of establishing payment/collection factories (centralized payables/ receivables processing centers). These centralized processing centers can further increase visibility into funding needs and liquidity management as well as tighten control over payment timing. However, corporates should not allow any such centralization initiative to endanger meeting the SEPA-migration deadline of February 1, 2014 - after all SEPA compliance is a regulatory project, while centralization efforts are optional.

Such treasury management decisions must be considered hand-in-hand with format strategy. XML is the designated format for SEPA transactions, and corporates must migrate to it, if they don't want to rely on (potentially costly) conversion services offered by a number of global banks and vendors. As many banks now recommend XML as the format for all future transactions (both SEPA and non-SEPA), migration is the obvious choice. Nevertheless, a move to XML may have a significant impact on corporates' enterprise resource planning (ERP) systems and connectivity because not only must XML be a supported output format, but these files also tend to be much larger than their domestic or global equivalents. Any transition should, therefore, follow a detailed consultation process, as well as be well-timed and managed both internally and with external systems providers.

And preparation complexities do not end here. International Bank Account Number (IBAN) and Bank Identifier (BIC) codes are the sole permissible account identifiers for SEPA transactions, and the issue of how to obtain and manage them is more complex than may be expected. This is especially the case for companies that operate in a number of European countries, as the procedure for obtaining these codes will vary between countries. While there are also vendor solutions available, these tend to be more expensive. In either case, some manual effort may be unavoidable. Once obtained, it must also be ensured that the relevant systems (such as ERP or HR systems) are able to accept/process IBAN and BIC. In some cases, this may require a new release/an upgrade of the system.

It should also be considered that under SEPA, the payment detail field is only 140 characters long, and many corporates will not be accustomed to such brevity. The majority tend to favour more detailed payment instructions because they pay numerous invoices simultaneously, and greater detail helps to avoid any potential confusion. If corporates are to break such well-established payments patterns, they must either be adjusted – by being broken down into more than one payment, for example – or corporates must find ways to make the information they provide more concise or available outside of the payment message.

And finally, for corporates using direct debits today, there are even more required steps when preparing for the migration to the SEPA direct debit.

## Meeting these requirements

As the examples above show, migrating to SEPA is a significant undertaking, and the scope of the project should not be underestimated. If corporate SEPA teams are to see that their organizations meet the compulsory compliance requirements in time, their best course of action is to work with a partner bank with the necessary expertise to ensure that corporates take the best route to migration, and the capabilities to ease the burden of compliance. The partner bank should also have a solid SEPA strategy and be in a position to offer a range of value-add services designed to optimize payments processes before and after SEPA migration.

SEPA is no longer an optional initiative. It is now mandatory, which makes it a top priority. With the compliance deadline in sight, corporates must begin preparations immediately if they are to be in ready in time. In most instances, their first port of call should be a partner bank with the necessary expertise, capability and SEPA-strategy to pave the way for a smooth and optimal migration.

As a leading global transaction banking service provider and proponent of the payments innovation opportunities the euro presents, Deutsche Bank has been a prominent player in promoting corporate interests across the banking industry in the run up to SEPA. We have been actively involved in the development of the initiative at all levels, from participation in regulatory debates to driving technology innovation. In order to help corporates fully migrate in time for the deadline we advocate - and have so done since 2007 - what we call a "4-Pillar" implementation strategy that aims to provide immediate, tangible financial benefits, data format flexibility, account flexibility, and access to value-added services designed to maximize the benefits of SEPA. The high level of flexibility inherent to our approach (there is no need to open dedicated SEPA accounts - instead all SEPA transactions can be initiated from existing accounts kept at Deutsche Bank branches in the eurozone - and a single format can be used for transactions worldwide) is so convincing that our four pillars have since been endorsed and adopted by the market in general. In addition, as another sign of Deutsche Bank's SEPA leadership, the Bank has made noteworthy, ongoing investment in an automated and scalable SEPA engine to deal with increasing payment flows. This reflects our belief in the long-term value of turning a fragmented market into a borderless payments zone, and is evidence of our long-standing commitment to the success of the single currency and development of the SEPA project.

## The countdown begins

SEPA may have got off to a slow start, but the end-date announcement means that the project is now running at full speed. All corporates operating throughout the 32 SEPA countries will be affected by the coming changes and many especially mid-tier and pan-regional companies operating in the eurozone countries - will find that a successful SEPA migration project requires a considerable amount of preparation. As the deadline is in sight, companies must act now and should immediately enlist the support and guidance of a suitable banking partner in order to begin preparations. As a trusted partner to many European corporates - both large and small -Deutsche Bank has developed a unique approach to SEPA migration that minimizes effort while maximizing benefits before and after the transition takes place. Not only does this lighten the load for corporates and provides a number of immediate and longer-term efficiency gains, it also contributes to future payment technology innovation and development for the countless users and beneficiaries of payment services throughout Europe. With the help of your trusted banking partner, you can achieve a lot more than mere SEPA compliance.

#### Executive summary: The SEPA journey so far

SEPA is a politically driven European payments harmonization initiative designed to turn fragmented national markets into a borderless-payments zone in which there are no differences between national and intra-European euro payments.

SEPA consists of 32 countries – all 27 EU member states (including 10 non-euro countries), the remaining countries of the European Economic Area (EEA), and Switzerland and Monaco.

#### Key dates

- 1999: Introduction of the euro
- 2000: EU's Financial Services Action Plan to create a single market for financial services (included the demand for a single payments market)
- 2002: Launch of the SEPA initiative by the European banking sector
- 2008: launch of the SEPA credit transfer
- 2009: launch of SEPA direct debit
- 2014: February 1, deadline for mandatory migration to SEPA credit transfer and SEPA direct debit

# Executive summary: SEPA credit transfer and SEPA direct debit

Corporates must be using the SEPA Credit Transfer (SCT) and SEPA Direct Debit (SDD), instead of existing non-urgent mass credit transfers and direct debits, by February 1, 2014.

SCT enables payment service providers to offer a basic credit transfer service in euro throughout the eurozone whether for single or bulk payments. Users benefit in terms of functionality, cost effectiveness, ease of use and processing efficiency.

# STANDARD &POOR'S RATINGS SERVICES

## **Funding Growth In Europe:**

What's The Missing Link For The Mid-Market?

Trevor Pritchard

Managing Director and Analytical Manager

Corporate & IFR Ratings EMEA

May 1, 2013

# **Funding Growth In Europe**

## What's The Missing Link For The Mid-Market?

 Mid-size companies are increasingly seeking alternative sources of funding as banks rein in lending

#### Possible Alternatives

- Private lending market
- Private placements
- Bond platforms on exchanges
- Securitizations

#### Hurdles

- Most of these markets in Europe are still in infancy
- Operate in different regulatory and accounting environments

# Why The Mid-Market Needs Growth Funding

# **Number Of Companies In Key Segments Globally**

In the U.S. and select developed European and Asian markets,
 S&P identified almost 50,000 mid-sized corporates

Large Corporates 11,000

Medium-Sized Corporates With Debt: \$20mln -\$200mln 49,000

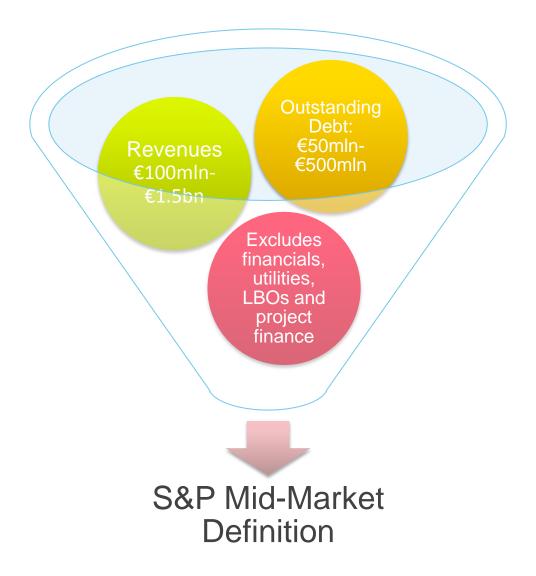

Small & Medium-Sized Companies With Debt < \$20mln 628,000

Micro Businesses With Debt < \$20mln and Revenue < \$2.6mln 3,400,000

Sources: OECD, Eurostat, World Bank, BIS

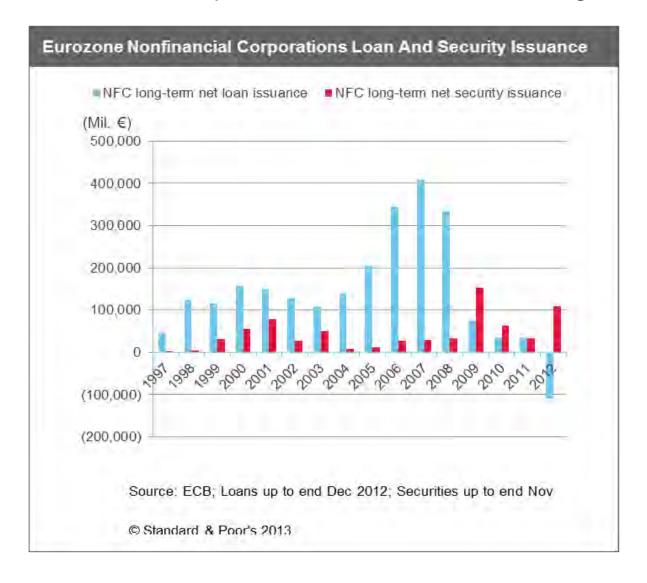

## A Hard-To-Define Asset Class

# Disintermediation In Europe Is Beginning

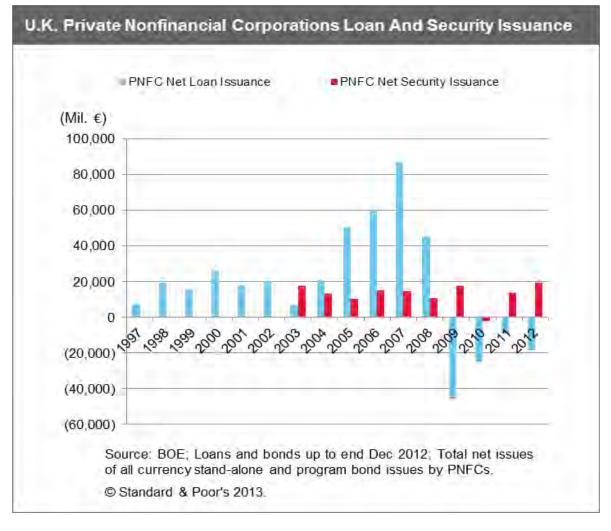

Net loan issuance to corporates in the eurozone turned negative in 2012

## Disintermediation In Europe Is Beginning

 Yet, Bank of England data shows a much more long-term contraction beginning in 2009 through to 2012

# **Alternative Funding Is Nascent**

# Non-Bank Sources Of Lending

Pre-2008: Overall non-bank lending dominated by:

- CLO funds
- Mezzanine funds
- Some non-leveraged loan managers (such as M&G Investments)

Financial crisis derailed new entrants to this market

There has been a resurgence in interest recently from private equity and hedge funds, particularly for mid-market funding:

- Axa Private Equity
- Ares Capital
- Amundi

### New CLO transactions under way

 Not traditionally mid-market lenders, but they do lend to some and have indicated they may increase this activity

## **Private Placement Markets Have Limited Capacity For Mid-Market**

U.S. private placement market is open to U.S. and non-U.S. companies. Main investors are insurance companies.

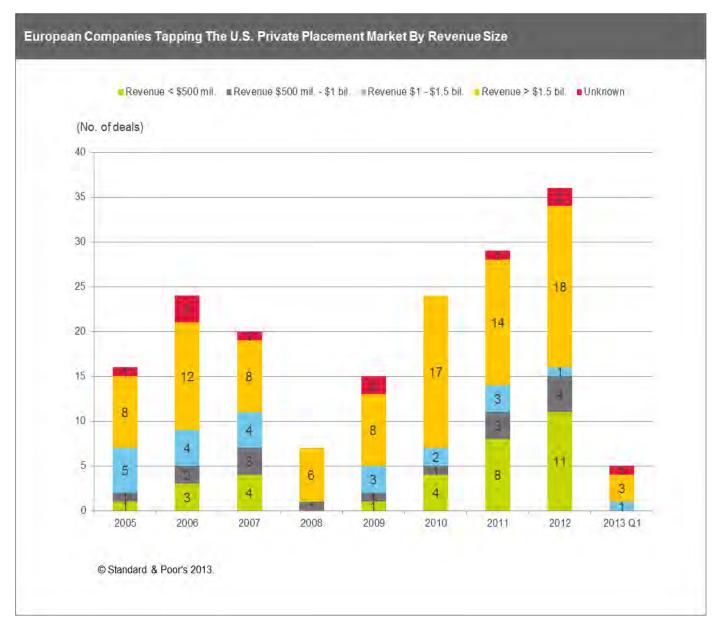

- Issuers can raise up to \$1bn, typically fixed rate with 3-15 year maturities
- Long term "buy-and-hold" investors do their own rigorous due diligence and take comfort from strong covenants
- Market is seen as stable and no SEC registration required

Schuldschein is the most developed of the European PP markets with non-German corporates increasingly using it; investors are mainly German banks and insurers.

- Companies typically borrow €10-500mln, floating- or fixed-rate with 2-10 year maturities
- Open to retail investors

## **U.S. Private Placement Market**

## **Developing Private Placement Markets**

## France

- Most deals completed are too big to fall within our MM definition
- However, the number is growing: 6 in 2H 2012-2013
- Société Générale and AXA established a joint venture to do private placements in France – signed two transactions in 2012
  - Néopost €150mln fundraising

# U.K.

- Association of Corporate Treasurers (ACT) leading a working group
- December report identified various barriers:
  - Clarification of regulatory treatment for insurance company investors
  - Standard documentation
  - Readily available market activity information
  - Track record of performance and defaults from investors
  - Investors prepared to use internal resources to participate

## Bond Platforms On Exchanges: Open To Retail Investors

# Germany

- > 55 companies across 3 exchanges
- 92% have revenues < €500mln
- At the low end of our definition

# France

- NYSE-Euronext
- Launched in 2012
- 3 deals so far: AggroGeneration S.A., Capelli and Homair Vacances

# Italy

- Borsa Italiana's MOT platform
- · Heavily dominated by bank funding
- Monti government's law change may help develop market

U.K.

- LSE's ORB
- Dominated by larger corporates (RBS, Tesco Bank, National Grid
- Some mid-market, however, like International Personal Finance PLC

# **Overcoming Obstacles**

# What's The Missing Link For The Mid-Market?

## Alternative Sources Are Nascent

- Mostly dominated by companies larger than our mid-market definition
- Bond platforms on exchanges are growing

### **Better Access To Information**

- Different regulatory and accounting environments make establishing a cohesive funding market in Europe difficult
- Small investors may not have internal research and risk capabilities

# Lessons from the Banking Crisis

John Cummins, RBS Group Treasurer

### Introduction

#### **John Cummins**

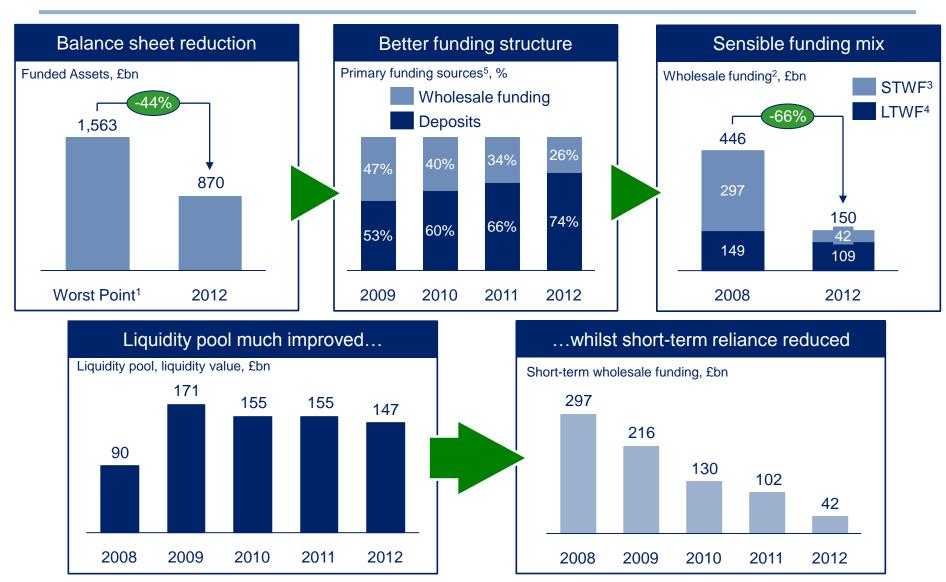

- RBS Group Treasurer, joined just after the ABN AMRO acquisition (2007- today)
- Previously:
  - Treasurer, Standard Life plc (1997 2007)
  - Senior roles in MBNA International Bank and Yorkshire Building Society
  - Director of IFFIM (2005 2012), raised \$4bn for vaccinations

Glad to be back in Liverpool, left in 1981 when the reds were European and league champions, still hoping for a Premier League title!

### Agenda

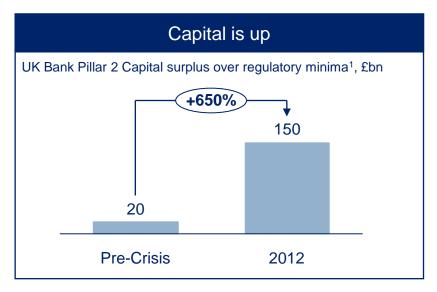

- Balance sheet improving the recovery of RBS and the wider UK sector
- Current market dynamics and outlook
- Adjusting to 'the new world' of Basel 3 and other regulations
- How will this impact corporate treasurers?

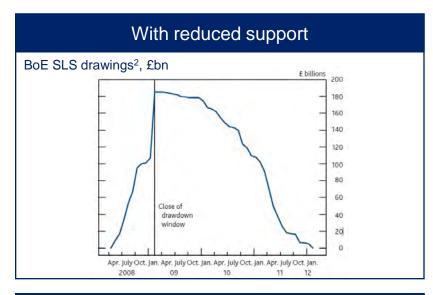

### RBS on the road to recovery

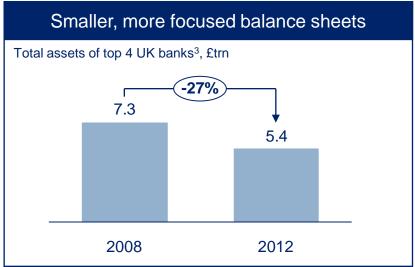

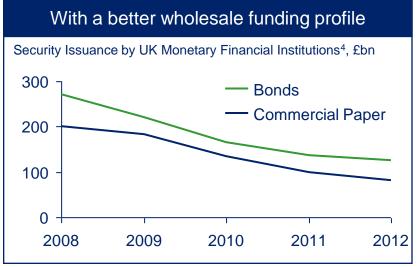

<sup>&</sup>lt;sup>1</sup> FY07 funded assets, fully consolidated balance sheet. <sup>2</sup> Excludes derivative collateral. <sup>3</sup> Short-term wholesale funding. <sup>4</sup> Long-term wholesale funding. <sup>5</sup> Primary funding sources exclude equity, repo and derivative collateral.

### The UK banking sector is much stronger...

<sup>&</sup>lt;sup>1</sup> Source: Andrew Bailey FT Interview, 21/10/12. <sup>2</sup> Source: Bank of England. <sup>3</sup> Source: RBS Analysis, includes RBS, Lloyds (inc. HBOS), Barclays and HSBC. <sup>4</sup> Source: Bank of England.

### ...but strength comes at a cost

### **Cost of Liquidity**

- Liquidity buffers are up markedly at UK banks
- PRA regime is restrictive buy Gilts, Bunds, Treasuries or hold cash.
- Each £ of additional liquidity has a carry cost
- Liquidity cost now factored into product pricing

#### **Cost of Funding**

- Costs have increased as UK banks have moved away from short-term debt
- Deposit competition has been fierce but subsiding given liquidity positions
- Term debt issued at high spreads relative to today's prices, now running off
- Real funding costs are factored into product pricing

#### **Cost of Capital**

- Continual push for more capital from regulators and markets
- More capital requires more returns to keep the same RoE
- Capital ratios have nearly tripled at UK banks, the cost of equity capital has not followed this

### Although support is forthcoming

### Whilst crisis-time funding and liquidity support has been withdrawn...

#### **Special Liquidity Scheme**

Bank of England scheme to swap illiquid assets for T-Bills, subject to haircuts.

Closed to all banks in January 2012

#### **Credit Guarantee Scheme**

HM Treasury scheme to guarantee bank's term debt issuance, subject to a fee.

All UK bank issuance matured by end-2012

#### **Asset Protection Scheme**

HM Treasury scheme to insure a certain pool of bank assets against losses.

One user: RBS; exited October 2012

2

### ...new schemes have appeared in their place

#### **BoE Funding for Lending**

Low cost funding, incentivises increasing UK lending balances. RBS is supportive.

Scope recently widened and extended to include asset finance

#### **ECB: LTRO / OMT**

Has vastly reduced stresses in bank and sovereign debt markets.

UK banks have drawn down modest LTRO funds, generally for their EU operations

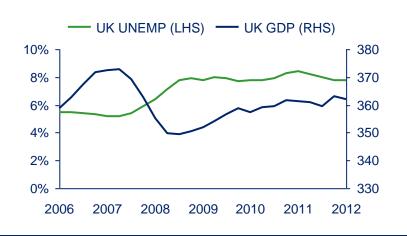

#### Liquidity rule relaxation

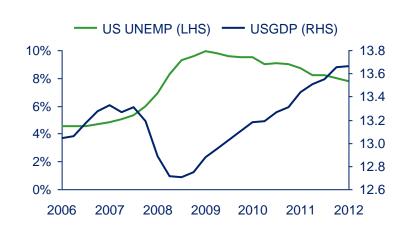

Discount window repo can now count toward liquidity under the UK regime, subject to a cap.

Basel III Liquidity Coverage Ratio (LCR) has been adjusted to relax criteria somewhat

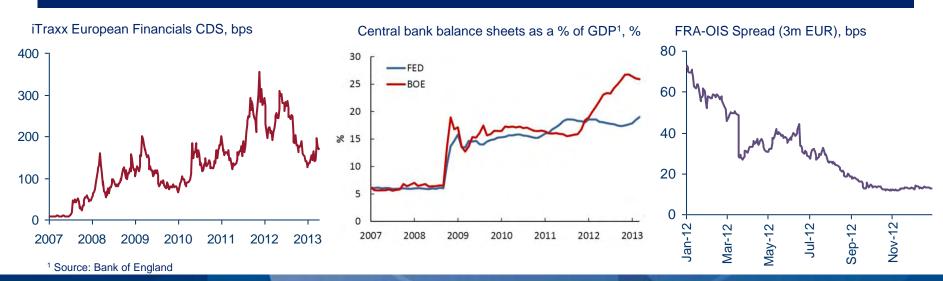

### Adjusting to the new world

### This isn't a normal recovery... is productivity declining?

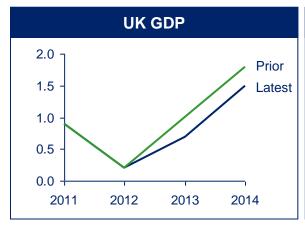

### ...and there are still stresses, albeit they have receded

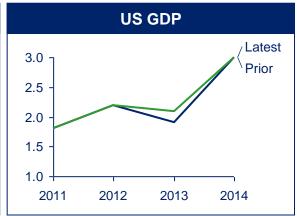

## It's likely continue to be hard for a while yet

### Economic forecasts continue to get pulled down (the IMF as an example)...

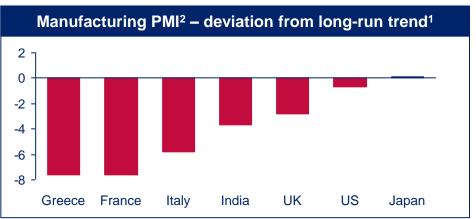

#### and the rest of the world is missing western consumer's dollars...

<sup>&</sup>lt;sup>1</sup> Source: Datastream, RBS Group Economics. <sup>2</sup> Purchasing Managers Survey

## It's not just the macro that's changing...

### This isn't 1930's-style trade protectionism, now 2010's regulatory protectionism

## 1930's – Trade Protectionism

- Exchange controls
- Trade wars and tariffs
- Rapid reductions in foreign lending
- Glass-Steagall

### 2010's – Regulatory Protectionism

- Repatriation of capital, liquidity and funding more difficult
- Regulators all want trapped resources within their local jurisdictions and desire for 'subsidiarisation'
- Less scope available to banks to move resources between subsidiaries
- Vickers' Independent Commission on Banking reforms and ring-fencing

### **Impacts**

- Products must reflect true economic cost
- Banks will pick their battles more carefully, markets will become more concentrated with national champions the likely winners
- The age of the 'global mega-bank' is under severe pressure, at the regulator's behest

### Everything points to easier recovery and resolution

### Basel III: an increased cost of doing business

### **Capital**

- Capital charges for products will alter dramatically
- Fixed income, commodities, long-dated derivatives and structured finance become much more heavily penalised
- Banks will need to generate a similar return on a higher level of capital

#### **Funding**

- Heavy bias towards long-dated funding (RBS learned this the hard way)
- Net-stable funding requirement used to enforce this
- Short-dated (less than 90 days) or breakable wholesale deposits are more costly for banks (from a cost of liquidity perspective)

#### Liquidity

- Most regulators have already increased their scrutiny of liquidity (particularly the UK) around or beyond Basel III
- Banks are now holding much higher quality (and lower yielding) liquid assets which incur carry costs given the sector's more elevated funding costs

## The changing hierarchy of creditors?

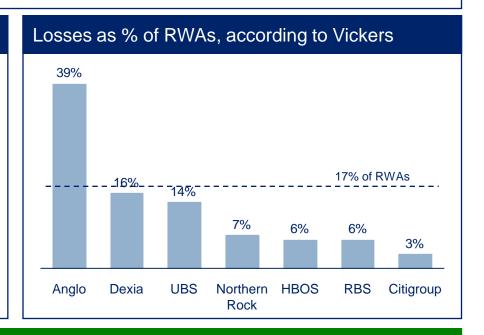

#### Preference for insured depositors is coming,

The Vickers commission recommendations and the European Union's Resolution and Recovery Directive are both pushing towards depositor preference

- Seems to be in-line with what has been present in the US for years
- Insured depositors will come ahead of all unsecured claims
- Legislators still keen to maintain traditional hierarchy of creditors after this

#### Bail-in debt

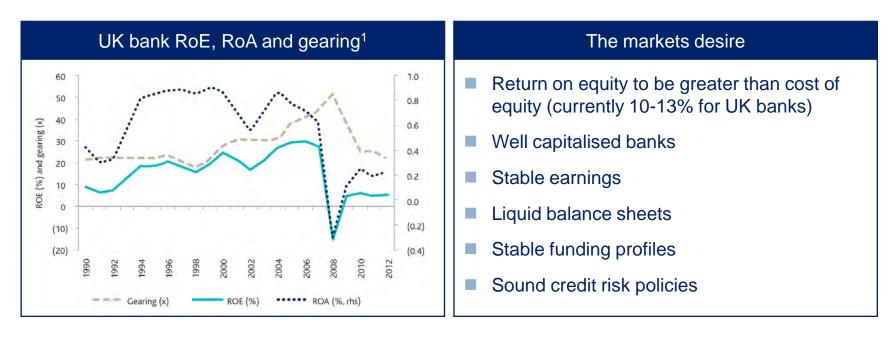

- Debt is at risk under the new regime
- However regulators want more capital and subordinated debt in order to preserve senior debt, where possible
- Regulators expect that total capital at c.17% should be able to recapitalise banks in most stressed scenarios
- Average total capital ratio of UK banks 16.3% up 450bps from 11.8% in 2007

Whilst deposits face a bail-in regime in most of the west, banks are much safer than they were

### Aside from the regulator, what does the market want?

# Pre-crisis, the market pushed banks to strive for ever increasing RoE without thinking about leverage

- Management of banks must balance a number of tight constraints when trying to deliver acceptable returns
- The cost of equity has not decreased materially, even though the level of equity in the system has nearly tripled

<sup>&</sup>lt;sup>1</sup> Source: Barclays Research. RoE: return on equity. RoA: return on assets.

## Rebuilding trust

#### **Customers**

- Fair and transparent
- Customer charter
- Customer centric
- Invest in the front-line

#### **Investors**

- Disclosure
- Accountability
- Involvement
- Management time

# The Public, Politicians & The Media

- Putting legacy 'sins' behind us
- Need to be 'socially useful'
- Customers before profit

### Top risks for a bank treasurer in 2013

#### **Market access**

Will the market still be there?

**Keeping people** 

motivated

Attracting and retaining when morale is low

# Keep the confidence of your investors

Continue to engage proactively

### The weak recovery

Is it built on solid foundations? Can it hold?

# What's next from the regulator?

When does regulation take a breather?

### Competition

Revenues, capital and funding are scarce and everyone wants them

### How does all this affect corporate treasurers?

### Alteration to banks' product-sets

- Basel III and other regulations will curb banks' willingness to offer certain products, or at least make them more expensive, collateral requirements will increase over time
- Long-dated swaps, structured finance and other fixed income products will be revaluated
- Fewer banks will be present in all product areas. RBS is a key example of this no ECM / M&A, commodities etc.

### **Specific products will change**

- Short-term deposits (less than 90 days) will be difficult for banks, given liquidity costs
- Banks will innovate, expect changes in T&C's
- Capital-heavy products will change but won't disappear

#### **Greater competition and improved service**

- Reduced trading revenues forces banks into more traditional client business and longer-term focus
- All banks are in the same boat, will look to differentiate on customer service (i.e. NatWest's 'Helpful Banking' or 'Ahead for Business' campaigns), product innovation and technology

### Conclusion

- The environment is challenging but we're working through; banks and corporates alike
- Governments, banks and corporates are all continuing to delever, this must end at some point
- Banks will be there for good customers and will compete heavily for their business
- Banks are becoming less self serving and refocusing on customers
- Product sets may change but this will be evolution, not revolution
